

Koushik Sathish

Senior Software Engineer – Distributed Systems & Stream Processing
Bengaluru, India

☎ +91 86605 34876 | ✉ koushiksathish3@gmail.com | [LinkedIN](#) | [Blog](#) | [Github](#)

Professional Summary

Senior Software Engineer with 6+ years of experience building **production-grade distributed systems and real-time stream processing platforms**. Specialized in **Java, Python, Kafka, and Flink-style architectures**, with a strong focus on **developer experience, system reliability, performance optimization, and cloud-native service design**. Proven track record of owning **mission-critical services**, designing internal developer platforms, and shipping scalable software used across global environments.

Experience

Confluent India Private Limited

Bengaluru

Senior Cloud Technical Architect, Product & Growth

09/2024

- Design and implement **real-time streaming services** powering Confluent Cloud using **Kafka and Flink-style processing models**.
- Develop **internal developer tooling** enabling customers to build custom stream processing logic using **UDF-like extensibility patterns**.
- Own production systems running across **multi-cloud regions**, contributing to platform reliability targets of **99.99%+ SLA**.
- Optimize **stream processing performance**, tuning throughput, state handling, and fault-recovery paths for high-scale workloads.
- Collaborate directly with Product and Core Engineering teams to translate customer use-cases into **production-ready features**.
- Author clean, secure, well-documented code following strict SDLC, code review, and CI/CD standards.

Oracle India Private Limited

Bengaluru

Software Developer II (Cloud & Integration Solutions)

07/2021 - 08/2024

- Designed and operated **event-driven microservices and integration pipelines** using Kafka-style streaming patterns across OCI and hybrid cloud.
- Built and tuned **high-availability Linux services** (RHEL, Debian) with focus on throughput, reliability, and fault isolation.
- Developed automation in **Java, Python, Terraform, and Ansible** for provisioning, monitoring, and operational excellence.
- Led customer-facing migration workshops modernizing legacy batch systems into **real-time stream processing platforms**.
- Reduced MTTR by **35%** through distributed observability design and SLA-driven alerting systems.

AppsNxt Cloud Solutions

Bengaluru

Software Engineer

03/2019 - 08/2021

- Architected and developed **multi-tenant SaaS platforms** using Kafka, FastAPI, and PostgreSQL serving 50+ organizations.
- Built **real-time data ingestion and processing pipelines** enabling streaming analytics use-cases.
- Created **Scikit-learn ML prototype** to simulate workload prediction and optimize cloud resource utilization.
- Owned end-to-end SDLC — design, development, deployment, monitoring, and performance optimization.

Education

Liverpool John Moores University

London

Master's in Computer Science

09/2023 - 09/2024

Completed my thesis in Dynamic Workload Management and Resource Provisioning in Multi Cloud Environments.

International Institute of Information Technology

Bangalore

Post Graduation in Computer Science

09/2022 - 09/2023

Underwent 1 year post graduation course in Full Stack in Java Specialization

Siddaganga Institute of Technology

Bachelor's in Information Science

Tumakuru

08/2017 - 07/2021

Core Skills

- **Languages:** Java, Python, Go
- **Stream Processing:** Apache Kafka, Apache Flink (UDF concepts, Table API familiarity, stateful processing)
- **Distributed Systems:** Partitioning, replication, back-pressure, fault tolerance, state management
- **Cloud & Infra:** AWS, GCP, Azure, Kubernetes, Docker, Terraform
- **Backend:** FastAPI, REST, gRPC, PostgreSQL
- **Ops:** Linux (RHEL, Debian), performance tuning, SLA/SLO, incident response, on-call readiness
